ODHIAMBO GEORGE WILLIAM BUSH

Nairobi, Kenya | +254 111 673 345 | bushg5200@gmail.com | github.com/billiam-creator

PROFESSIONAL SUMMARY

I am a software developer with growing hands-on experience in mobile engineering, full-stack web development, and production app deployment. At Brainverse Technologies I have worked across multiple live Android and iOS applications — handling feature updates, maintenance, and end-to-end release management including Google Play Console deployments and iOS App Store releases. I work confidently with Flutter, Dart, PHP Laravel, RESTful APIs, React, Node.js, and relational databases, and I have a strong track record of shipping clean, production-ready code and solving real integration challenges under pressure. Alongside my development work I run my own small business, which has given me a practical grounding in operations, financial management, and client relations. I am looking to keep growing as a developer in an environment where I can take on more responsibility and tackle harder problems.

PROFESSIONAL EXPERIENCE

Junior Mobile Developer

Brainverse Technologies | Feb 2026 – Present

- Maintain and develop features across multiple live mobile applications including Conferena, Paulines Africa, Waridi, and Ping Robot — working across Android and iOS platforms simultaneously.
- Own the full release cycle for Android and iOS: build preparation, code signing, AAB/IPA generation, and direct submission through Google Play Console and the Apple App Store — with direct access to the company's Google Play Console account to manage deployments independently.
- Delivered updates to the Conferena ticket scanner app and successfully deployed new versions to both Android and iOS users, ensuring consistent cross-platform stability and performance.
- Maintain and improve existing apps (Paulines Africa, Waridi, Ping Robot), addressing bugs, implementing updates, and keeping them stable across device types and OS versions.
- Optimise application performance for speed, memory efficiency, and responsiveness through systematic profiling and targeted fixes.
- Collaborate with the broader team on code reviews, sprint activities, and cross-functional integration, contributing to shared engineering standards and best practices.
- Debug and resolve production issues with root cause analysis, implementing fixes that prevent recurrence rather than applying short-term patches.

Software Developer

Pioneer Outsourcing (Believersolvo Call Center) | Feb 2024 – Jun 2025

- Designed, built, and deployed a full company website using HTML5, CSS3, and JavaScript — delivering a performant, mobile-responsive product aligned with business requirements and stakeholder expectations.
- Integrated third-party services and managed the codebase through Git, maintaining clean version control and reliable deployment workflows.
- Translated business requirements directly into technical specifications and working solutions through close collaboration with stakeholders.
- Provided ongoing maintenance, bug fixes, and platform improvements to keep the site stable and up to date.

Co-Founder & Operations Manager

Spik n Span Vacuum Cleaning Services, Nairobi | Feb 2026 – Present

- Co-founded and continue to run a cleaning services business, managing the full cycle of operations from client acquisition through service delivery and follow-up.
- Drive marketing independently through Facebook content, TikTok posts, and word-of-mouth — successfully generating consistent customer enquiries and repeat business.
- Manage all financial operations including budgeting, purchasing cleaning supplies and equipment, paying staff, and covering transport and maintenance costs.

- Handle client communications end-to-end — responding to enquiries, quoting jobs, and ensuring high satisfaction levels that have resulted in strong customer feedback.
- Coordinate and lead the cleaning team on jobs, managing logistics and ensuring consistent service quality across all engagements.

Outlet Manager

Xtreme Gamerz Cyber Cafe, Nairobi | Feb 2024 – Jun 2024

- Managed day-to-day technical operations of a busy IT environment, handling system troubleshooting, diagnostics, and maintenance.
- Developed strong problem-solving and customer-facing skills in a fast-paced setting.

KEY PROJECTS

Conferena Ticket Scanner – Live on Google Play & App Store

Flutter · Dart · REST APIs · Android · iOS · CodeIgniter Backend

- Built and published a Flutter mobile app enabling event organisers to scan and validate attendee tickets via QR code — deployed to both Google Play Store and the Apple App Store.
- Implemented dual authentication (Bearer token + session cookie) with session persistence, auto re-login, and secure credential storage.
- Built a real-time events dashboard consuming a live CodeIgniter REST backend, displaying booking counts and event data with efficient API handling.
- Reverse-engineered browser session flow using DevTools to solve an authentication failure in Flutter where standard Bearer token auth returned empty data.
- Handled full release management: Android signing, AAB generation, Play Store submission, and iOS IPA build and App Store deployment.

Full-Stack E-Commerce Platform Simulation

React · Node.js · RESTful API · MySQL

- Architected a full-stack inventory and sales management system — data model, REST API layer, and front-end interface — built from scratch.
- Implemented secure user authentication and role-based authorisation, applying data protection and access control best practices.
- Structured the backend as a modular REST API with clear separation of concerns.

Responsive Portfolio Site

HTML5 · CSS3 · JavaScript · Git · GitHub

- Designed, built, and deployed a mobile-responsive portfolio site, managed entirely through Git and hosted on GitHub.

TECHNICAL SKILLS

Mobile: Flutter, Dart, Android (Android Studio), iOS deployment, cross-platform development

Backend: PHP (Laravel), Node.js, Express.js, RESTful API Design, Python

Frontend: React, Vue.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

Databases: MySQL, PostgreSQL (familiar), MongoDB, Firebase

Release & DevOps: Google Play Console, Apple App Store, AAB/IPA builds, Git, GitHub, AWS, Azure, Docker (familiar), CI/CD awareness

Security: Bearer token auth, session management, OWASP awareness, secure API design

Other: Code reviews, technical documentation, agile/sprint workflows, system diagnostics

EDUCATION

Diploma in Full Stack Development — Institute of Software Technologies | Sep 2024 – Sep 2025

Certificate in Software Development — Institute of Software Technologies | Sep 2023 – Jan 2024

KCSE Certificate – Grade B — Miranda High School | Jan 2019 – Dec 2022
